

Storm Drains Compromised - Update 8/18/20

They build a berm in the road to direct all the silt and water to a compromised storm drain that goes directly to "Red Lake" without a single prophylactic measure to slow or stop the silt path to the lake.

Compromised Storm Drains Collect Silt and Water

Of course they couldn't just do this to just one storm drain, they had to do it to all of them.

Silt and Water Pipeline to the Lake

After the silt and water enter the storm drain, it goes directly to the drainpipe that leads to this unprotected outlet, and then goes straight down the ditch to the lake.
